Curing Patient Misidentification

Ensuring that patient identification is completed efficiently and correctly can significantly improve patient safety, help prevent medical identity theft, and increase revenue. This course discusses traditional patient identification solutions and biometric patient identification solutions. Biometric solutions have proven to be more effective in many ways than traditional methods.

After completing this course, you will be able to:

- Determine the role that patient misidentification can play in causing medical errors
- Name errors that can be caused by patient misidentification
- Compare traditional patient misidentification solutions to biometric solutions
- Identify ways to avoid outpatient misidentification mistakes

Registration:

- Participants can earn 1.0 contact hour.
- Registration is available by phone at [888.700.5223](tel:888.700.5223) or at healthcarebusinessinsights.com/courses.

Additional Information:
